A FRAMEWORK SYSTEM AND METHOD FOR TESTING SERVER PERFORMANCE

Abstract of the Disclosure

The present invention discloses a framework system for testing server with mixed workloads and a test method thereof, comprising workload case configure utility interface which includes function that let the framework invoke the third party's workload configure utilities to define workload cases for various test purpose; and

5　workload interface which includes function of workload setup, control and monitor. The advantage of the invention is that the third party can flexibly adds his workloads into the framework system via a workload case configure utility interface and a workload interface.
